

ABSTRACT OF THE DISCLOSURE

A communication apparatus capable of performing communication with the information server in the first and the second communication modes, after establishing a connection with the information server in the first communication mode at step S101, receives an information acquisition request from the operator (S102), stores the condition of communication connection with the information server at that time as connection information (S104), disconnects the communication in the first communication mode (S105), establishes a connection with the information server in the second communication mode to perform switching of communication mode (S106), and restores the communication connection condition based on the connection information stored when the communication in the first communication mode is disconnected (S107).
